

Navigation, Forms and Validation

Gill Cleeren

@gillcleeren

Outline

Navigation with the nav element

Using the new input elements

Validating form input with HTML5 elements

Target of This Module

We'll have a **fully-working menu**

The **Checkout page** will be created using the new input elements

The Checkout page contains **validation** on the form element

Navigating the Coffee Store

```
<nav>
  <ul>
    <li>Home</li>
    <li>Work</li>
    <li>Blog</li>
    ...
  </ul>
</nav>
```

Validating Form Input

The maxlength Attribute

```
<form>
```

```
  Choose your user name: <input type="text"  
    name="username" maxlength="20">
```

```
  <input type="submit" value="submit">
```

```
</form>
```

Choose your user name: ×

The pattern Attribute

```
<form>  
  Country code: <input type="text" name="country_code"  
    pattern="[A-Za-z]{3}">  
  <input type="submit">  
</form>
```

Country code:

 Please match the requested format.

The required Attribute

```
<form >  
  Username: <input type="text" name="username" required><br/>  
  <input type="submit">  
</form>
```

Username:

Submit

This is a required field

Username:

Submit

! Please fill out this field.

The max and min Attribute

```
<form >  
  Number of pieces:  
  <input type="number" name="pieces" min="1" max="10"><br>  
  <input type="submit" value="submit">  
</form>
```

Number of pieces:

You must enter a value between 1 and 10

The placeholder Attribute

```
<form>  
  <input type="text" placeholder="First name"><br>  
  <input type="text" placeholder="Last name"><br>  
  <input type="submit" value="submit">  
</form>
```

First name
Last name
submit

The novalidate Attribute

A form won't be submitted if it's not valid

Can be overruled with the novalidate attribute

```
<form novalidate>  
  E-mail: <input type="email" name="emailaddress">  
  <input type="submit">  
</form>
```

The formnovalidate Attribute

```
<form>  
  E-mail: <input type="email" name="userid"><br>  
  <input type="submit" formnovalidate="formnovalidate"  
  value="submit">  
</form>
```

Demo: Adding Validation on the Form

Summary

nav can be used to add semantic meaning to a traditional menu

Forms can be more intelligent

- More input types available
- Validation on form and input types
