Store.js

Store.js is a `localStorage` wrapper for all browsers without using cookies or flash. Uses `localStorage`, `globalStorage`, and `userData` behavior under the hood.

Release Changelog

Amplify.js

Amplify's store component handles persistent client-side storage, using standards like `localStorage` and `sessionStorage`, but falling back on non-standard implementations for older browsers.

lawnchair

a `lawnchair` is sorta like a couch except smaller and outside. perfect for html5 mobile apps that need a lightweight, adaptive, simple and elegant persistence solution.

- *collections*. a `lawnchair` instance is really just an array of objects.
- *adaptive persistence*. the underlying store is abstracted behind a consistent interface.
- *pluggable collection behavior*. sometimes we need collection helpers but not always.

try it! open firebug, web inspector or pull out your weinre...

```
var store = new lawnchair({name:'testing'}, function(store) {  
  
    // create an object  
    var me = {key:'brian'};
```

```
... yes even after a page refresh!  
    , function(me) {  
    me);
```

Lawnchair.js

Lawnchair.js features adaptive persistence where the underlying store is abstracted behind a consistent interface.
